1929-07

Carcinome canalaire infiltrant

Carcinome lobulaire infiltrant

Contingent de carcinome intra-canalaire cribriforme

1927-07

- Signes cutanés associés

1927-07

1791-07

- ❑ Patiente de 62 ans
- ❑ Pas d'antécédent connu de carcinome mammaire
- ❑ Pas de mammographie antérieure
- ❑ Mammographie de dépistage

1791-07

1791-07

Micro-biopsies sous échographie :
fibro-adénome

1119-07

- ❑ Patiente de 38 ans
- ❑ Antécédent de cancer du sein chez la mère à 42 ans et chez la grand mère maternelle
- ❑ Exérèse d'un fibro-adénome du sein G en 2004 - cicatrice interne
- ❑ Vague densification inféro-interne du sein G

1119-07

1119-07

1119-07

1119-07

- Résultat de la micro-biopsie
 - Tissu conjonctif avec aspects d'hyperplasie pseudo angiomateuse du stroma
 - Absence de lésion proliférative
- Revue des lames et confrontation avec l'imagerie : adéno-lipome

1601-04

- ❑ Patiente sans antécédent familial de cancer du sein
- ❑ Carcinome intracanalairé du sein D en 2004 à l'âge de 60 ans -Mastectomie partielle et irradiation
- ❑ Masse du sein G à la jonction des quadrants externes - microbiopsies sous échographie
- ❑ Microcalcifications du sein D lors du bilan de cette masse

SEIN G : Carcinome lobulaire infiltrant de grade II

SEIN D : Carcinome mucineux de grade II

1956-05

- ❑ Patiente de 45 ans
- ❑ Pas d'antécédent familial
- ❑ Biopsie mammaire D pour anomalies bénignes 3 ans avant
- ❑ Microcalcifications bilatérales
- ❑ Macrobiopsies dans le QIIInt du sein D

1956-05

1956-05

1956-05

- Adénose sclérosante
- Petit papillome intra-galactophorique
- métaplasie cylindrique

1956-05

- ❑ De juin 05 à mai 07
- ❑ 5 mammographies bilatérales ou unilatérales
- ❑ 6 échographies
- ❑ 2 IRM
- ❑ 4 cytoponctions sous échographie
- ❑ 1 procédure mammotome

1956-05

CLASSIFICATIONS BIRADS :

0

4

3

1013-07

- ❑ Patiente de 57ans
- ❑ 6 ans de THS -arrêt depuis 3 ans
- ❑ Pas d'antécédent familial de cancer du sein
- ❑ Nodule centimétrique rétro-aréolaire du sein G
- ❑ Microcalcifications en augmentation nette en 2 ans retro-aréolaires G
- ❑ Pas de cible identifiable nettement en échographie

1013-07

1013-07

1013-07

Résultat du mammotome : papillome
intra-canalair sclérosant

Surveillance proposée à la patiente
après avis RCP

208-07

- ❑ Patiente de 50 ans
- ❑ Surveillance après transplantation rénale - (néphropathie gravidique-HTA)
- ❑ Mère cancer du sein ?
- ❑ Adressée pour microcalcifications du sein D
- ❑ Examen clinique normal

208-07

208-07

Se. 2
Im. 1

3524-02

3524-02

- Ganglion intra-mammaire
- Stabilité dans le temps

3524-02

3488-06

- ❑ Patiente de 69 ans sans antécédent particulier
- ❑ Mammographie de dépistage normale en 2004
- ❑ Pas de signe fonctionnel mammaire
- ❑ Découverte en 2006 à l'occasion d'une mammographie de dépistage d'une masse rétro-mamelonnaire du sein G associée à une rétraction du mamelon (4x5cm - pas d'adénopathie)

1639-77

1639-77

1639-77

1127-06

- Patiente ayant présenté plusieurs récurrences d'un schwannome malin de l'avant bras
- Apparition d'une masse très interne du sein D

1127-06

1127-06

1031-06

- Anomalie radiologique du sein D connue et peu évolutive

1031-06

III. 5

Lacune de 26x24x21 mm
Flux vasculaires
périphériques

1031-06

1031-06

1929-72

- ❑ Patiente traitée antérieurement pour un carcinome mammaire du sein G
- ❑ Pas d'anomalie clinique

1929-72

Ex. 197201929A16CAV

Se. 2

77-97

Cyto-stéatonecrose post
thérapeutique avec
calcifications non tumorales

2883-04

- Patiente de ans ayant des antécédents de cancer du col utérin
- Adénomatosose mammaire bilatérale et adénolipome interne du sein G
- Biopsies 14g sous stéréotaxie

2883-04

2883-04

- ❑ Opacité périphérique : CCI
- ❑ Région avec des microcalcifications : CCI
- ❑ CCI développé au contact et dans un adénolipome

1876-08

- Patiente de 49 ans
- Sœur ayant eu un cancer du sein
- Examen clinique normal
- Première mammographie de dépistage

1876-08

1876-08

1876-08

1791-08

- Bilan d'un carcinome mammaire
